CODING PROFILES

- **LeetCode**: Rated 1734 (Top 11%)
- **CodeChef**: Rated 1545(2*), 1780(DSA)
- **Codeforces**: 1071(max)

EXPERIENCE

ViniBrawn Health Care Solutions

September 2025 – Feb 2026

Software Developer Intern

Gurgaon, Haryana

- Architected and built the Flutter-based application frontend, designing end-to-end user flows, core screens, and interactive components to deliver a cohesive mobile application experience.
- Integrated backend APIs and Razorpay payments, connecting frontend workflows with application services while handling payment flows and transaction processing.
- Implemented database queries for user-specific data, enabling reliable retrieval and management of user information across application workflows.

Open Source Contributor

October 2025 – Present

- Extended case-based programming blocks to support comparison operators, preserving selections through block mutations and generating corresponding PLUTO code. #4
- Redesigned continuation test blocks with checkbox-based case selection, preserving per-case actions across toggles and saved workspace reloads while maintaining backward compatibility. #5
- Fixed procedure parsing for empty main blocks by updating the grammar and adding regression tests to ensure valid Python code generation. #8
- Expanded integration test coverage across lexer, parser, type checking, resolution, control flow, and module loading, adding tests for 20+ previously uncovered compiler error cases. #772

PROJECTS

PitWall Copilot | *Python, Javascript, React, Node.js, Hugging Face, NLP, REST APIs*

August 2026

- Built an AI-powered communication platform that transforms unstructured radio messages into structured, actionable information using retrieval, classification, and rule-based decision making.
- Engineered a role-based and rule-based processing pipeline that separates driver/engineer communication, retrieves relevant F1 radio examples, and uses Hugging Face classification for unfamiliar messages.
- Implemented confidence-based decision making and deterministic fallbacks for reliable AI outputs.

JobRadar | *Python, Neo4j, Notion MCP, Telegram, GitHub Actions*

July 2026

- Built a Telegram-based RAG job discovery and application assistant that extracts job postings, performs explainable rule-based profile matching, supports conversational search, and tracks application checklists.
- Designed a multi-service architecture integrating Neo4j for relationship modeling, Notion for application tracking, and GitHub Actions for automated job scans and reminders, maintaining synchronized application state.

TECHNICAL SKILLS

Languages: Python, C++, Go, Dart, JavaScript, TypeScript, SQL, Rust, Java

Frameworks: Node.js, Next.js, Flutter, React, FastAPI, Express

Database: PostgreSQL, MySQL, MongoDB, Redis

Developer Tools: Git, Docker, Linux, Bash, AWS, EC2, Lambda, Postman, Nginx

Libraries: http, Provider, axios, express, net/http, context, pandas, NumPy

ACHIEVEMENTS

Hackathon: Won the Notion x GDG hackathon at IIIT Delhi

LeetCode: Achieved Global rank 1477/30k and 1916/35k in Weekly contest 508 and Weekly Contest 500

CodeChef: Achieved Global rank 366/50k, 890/40k in Starters 227 and Starters 237 respectively. And 379/10k in DSA Challenge 015
